Boston, MA | U.S. Citizen

PROFILE

Robotics systems engineer with an M.Sc. in Autonomous Systems and a Summa Cum Laude B.S. in Electromechanical Engineering. Across **PerPlant**, **Harvard Microrobotics**, **Raytheon Technologies**, and **DEKA R&D**, built and debugged physical systems spanning ROS2/C++/Python, embedded interfaces, sensing, controls, computer vision, mechanical integration, and validation. Strongest where robotics software, hardware, and real-world users and constraints meet.

SKILLS

Programming: C++, Python, Embedded C, SQL, MATLAB

Robotics: ROS2, MicroROS, UR5e, PLCs, CMake

Perception / Data: OpenCV, NVIDIA Jetson, Keyence vision, UMAP/HDBSCAN

Systems / Test: hardware/software integration, PID, LabVIEW, Modbus TCP/IP, Docker/GitHub Actions

Mechanical: SOLIDWORKS (CSWA), CAD/FDM, fixture design, instrumentation

PROFESSIONAL EXPERIENCE

PerPlant | Robotics Co-op

02/25 - 11/25 | Copenhagen, DK

- Integrated ROS2 thermal/GPS field sensing in C++/Python using OpenCV, NVIDIA Jetson, and MicroROS; redesigned a multi-camera fixture to add thermal imaging and translated farmer feedback into technical requirements.
- Built CV/data curation tooling using ROI filtering, detector embeddings, UMAP/HDBSCAN, and grouped splitting to create representative annotation/evaluation batches from a 150,000+ image field dataset.

Harvard Microrobotics | Robotics Co-op

09/22 - 03/23 | Allston, MA

- Developed Flask/socket robot-operation interfaces spanning Embedded C and MicroROS for teleoperated/autonomous underwater workflows; also contributed to planetary-gearbox design and cross-subsystem debugging.

Raytheon Technologies | Innovation / Robotics Co-op

01/22 - 05/22 | Andover, MA

- Drove an epoxy-automation project from a manual-process problem to a working UR5e/PLC/Keyence vision system with modular CAD fixtures, gathering requirements across manufacturing and process stakeholders; the team estimated roughly \$7M in potential ROI.

DEKA Research and Development | Controls Intern

2019; 2020-2021 | Manchester, NH

- Built biomedical R&D test and traceability workflows spanning electrical/impact/thermal testing, PID-controlled LabVIEW/Modbus instrumentation, and RFID/Python/SQL data capture while working within FDA/clinical and patient-safety constraints.

SELECTED PROJECTS

M.Sc. Thesis | Tendon-Driven Finger Actuation

2026 | DTU

- Built an end-to-end tendon-driven finger-actuation research platform integrating reduced-order models, CAD/FDM hardware, wearable interfaces, motor/encoder control, and Python/OpenCV measurement.
- Validated 1,000/1,000 rigid-fixture cycles at 97.5% of a 49.93° engineering comparator with 0.26% mean period error; supervised three student interns across fixture, control, vision, and sensing work.

Teradyne Cartesian Robot | Connector Test System

2023 | Wentworth / Teradyne

- Built a Raspberry Pi/ESP32 Cartesian robot with load-cell feedback and automatic tool changing; achieved 0.01 mm travel precision and 0.5 g load standard deviation; published at IEEE SII/SICE 2024.

SunnySips | Founder & Full-Stack Developer

2025 - Present | Released iOS / Web Product

- Shipped and maintain a live iOS/web product using SwiftUI, FastAPI, Docker, automated testing, and GitHub Actions CI/CD; in-person café/user discovery changed feature priorities, including future-planning functionality.

EDUCATION

Technical University of Denmark (DTU)

2024-2026 | Lyngby, Denmark

M.Sc. Autonomous Systems | Thesis defended; requirements completed Aug. 2026
Full Merit Scholarship - one of 30 recipients

Wentworth Institute of Technology

2019-2023 | Boston, MA

B.S. Electromechanical Engineering
Summa Cum Laude · Dean's Award in Electromechanical Engineering
